👤 PROFILE

Computer Science undergraduate with hands-on experience in AWS cloud infrastructure, CI/CD automation, and full-stack development (MERN stack, Java). Seeking a DevOps Engineer or System Engineer role to apply practical experience in cloud infrastructure, deployment automation, and application development.

🎓 EDUCATION

Faculty of Computing, University of Bedfordshire 2024 – Present
BSc . Computer Science(Undergraduate)
Richmond College, Galle 2015 – 2024
Successfully Completed OLs
ALs (Biological Science Stream): Physics - C, Chemistry - C, Biology - C

🧰 PROJECTS

AWS Cloud Infrastructure, CI/CD Pipeline 2026 - ongoing

- Designed and deployed a secure, multi-tier VPC with public/private subnets, custom route tables, and Internet/NAT gateways; configured security groups and network ACLs to enforce least-privilege access for EC2 instances across both tiers.
- Built an end-to-end CI/CD pipeline using CodeCommit, CodeBuild, and CodePipeline, implementing a Blue/Green deployment strategy via CodeDeploy for zero-downtime releases. Provisioned infrastructure as code with Terraform, deploying a load-balanced application across multiple availability zones; used CloudFormation for repeatable stack templates.
- Containerized an application and deployed it through ECR and ECS, with CloudWatch alarms and EventBridge rules configured for monitoring and event-driven automation.
- **Technologies:** AWS (EC2, VPC, IAM, S3, Route 53, CloudFormation, CodeCommit, CodeBuild, CodePipeline, CodeDeploy, ECR, ECS, CloudWatch, EventBridge, Secrets Manager), Terraform, Docker, Bash

Linux Infrastructure & Web Server Lab 2025

- Deployed and configured an Ubuntu Server instance in Oracle VirtualBox to simulate a small business server environment. Installed and configured the Apache Web Server to host a sample company intranet site, including basic virtual host setup.
- Configured SSH for secure remote server administration and day-to-day system management. Set up and managed the UFW firewall to control inbound and outbound traffic and restrict access to essential services. Wrote a Bash script to automate scheduled backups of web server files and configuration data.
- Configured basic system monitoring to track server resource usage (CPU, memory, disk) and service status.
- **Technologies:** Oracle VirtualBox, Ubuntu Server, Apache, SSH, UFW Firewall, Bash Scripting, OpenSSL, Linux User & Permission Management

Pre-school Management System - GitHub Repo

2026

- A software solution designed to streamline administrative and academic operations in early childhood education centers, including student records, attendance, fee management, and parent-teacher communication.
- **Technologies:** React, Node.js, Express.js, MongoDB
- **Contribution:** Full-stack development

Logistic Transport Management System - GitHub Repo

2026

- A Java-based desktop application for managing transportation logistics, built with OOP principles.
- **Technologies:** Maven, Swing/AWT GUI, and JDBC, OOP, API
- **Contribution:** GUI Interface, Shipment Scheduling

AussiePath Customer Portal - GitHub Repo

2026

- Developed a responsive customer portal for an Australian migration consultancy, enabling users to register, manage profiles, submit inquiries, and track their application process through a modern and user-friendly interface.
- **Technologies:** React.js, JavaScript, HTML, CSS
- **Contribution:** Developed the frontend, implemented responsive UI components, integrated backend APIs, and collaborated with the backend.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, Python, C, SQL, PHP

Frameworks: React, Express, Bootstrap

Databases: MySQL, MongoDB, Firebase

OS: Ubuntu Linux , Windows Server

Infrastructure Security: Apache Web server, IIS Web Server SSL , SSL Certificates , SSL VPN

System Administration: SSH, Linux User, Linux file permissions, UFW firewall

Networking: DNS, DHCP, TCP/IP, Public Private IP addressing

Virtualization: Oracle VirtualBox
